Netflix Movie Data Analysis Project

📌 Overview

This project explores **Netflix movie data** using Python libraries to uncover insights about genres, popularity, votes, and yearly trends.

Netflix, founded in 1997 by Reed Hastings and Marc Randolph, evolved from a DVD rental service into a global streaming giant. Today, it serves over **283M paid members** across 190+ countries, generating billions in revenue.

The analysis demonstrates how **data science techniques** can be applied to entertainment datasets to support business decisions.

🛠️ Tools & Libraries

- **Python 3.x**

- **NumPy** – numerical computations

- **Pandas** – data cleaning, manipulation, and analysis

- **Matplotlib / Seaborn** – data visualization

- **Jupyter Notebook** – interactive coding environment

📁 Dataset

- Source: Netflix movie dataset (9,000+ movies)

- Columns include: `title`, `genre`, `vote_average`, `popularity`, `release_year`, etc.

🎯 Objectives

The project answers key business questions:

1. What is the most frequent genre of movies released on Netflix?

2. Which movie has the highest votes in the `vote_average` column?

3. What movie got the highest popularity? What's its genre?

4. What movie got the lowest popularity? What's its genre?

5. Which year has the most movies filmed?

📊 Analysis & Insights

- **Genre Trends**: Identified the most common genres on Netflix.

- **Votes**: Highlighted movies with the highest average ratings.

- **Popularity**: Compared movies with maximum and minimum popularity scores.

- **Yearly Trends**: Visualized which years had the most movie releases.

📈 Visualizations

- Bar charts for genre frequency

- Line plots for yearly movie counts

- Scatter plots for popularity vs. votes

- Highlighted top/bottom movies by popularity
